This CDS clone is a part of a collection of human full length
This CDS clone is a part of a collection of human full length
Harvard Institute of Proteomics. Bach CDS has been cloned in two
forms: with and without stop-codon (to allow fusion with C-terminal
tag). The CDS has been directionally cloned using BD In-Fusion(TM)
cloning system between the Sall and HindIII sites of the pDNR-DDAL
vector. Additional sequences in the clone: 'ACC' after Sall site
and before 'ATG' to provide Kozak consensus sequence; 'GG' after
last codon and before HindIII site to maintain reading frame.

Consortium/LINL at: http://image.llnl.gov Series: IRAK Plate: 62 Row: 1 Column: 3
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Direct Submission

NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NOTE: This is a 'working draft' sequence. It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               63747: contig of 63747 bp in length 63847: gap of 100 bp 73892: gap of 100 bp 154550: contig of 80458 bp in length 154550: contig of 80458 bp in length 167808: contig of 80458 bp in length 167908: gap of 100 bp 167908: gap of 100 bp 176711: contig of 8803 bp in length 176811: contig of 8689 bp in length 176811: contig of 56689 bp in length 233500: contig of 56689 bp in length 233500: gap of 100 bp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                              This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP to phosphate. Furthermore, this activity of an be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a method that identifies modulators of the target protein, which is a immunoundulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasis, thestendish, cardiac hypertrophy, immune disorders and inflammation. This polymucleotide sequence is human KID DNA (SeqID 3) encoding a full length KID enzyme of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                             The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for medulators of a motor protein which has microtubule stimulated Arpase activity, a methods of testing for Arpase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target compose, and includance or the binding characteristics or compose, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating cellular proliferation disorders such as an inflammation, for treating disorders associated with kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of modors of the invention, inflammatory bowel disease and considered modors of the invention. Note: The specification states that this capen considered modors of the invention. Note: The specification states that this does not appear to be the case.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
```

The present invention describes a method for modulating the expression of a thanatos (death)-associated protein (THAP) responsive gene. The method comprises modulating the interaction of a THAP-family polypeptide or its biological fragment with a nucleic acid, and so enhancing or repressing the expression of the THAP responsive gene. Also described: (1) a method of of modulating the expression of a gene responsive to a THAP/fohemokine complex; (2) a pharmaceutical composition comprising a THAP responsive element in a pharmaceutical carrier; (3) a transcription factor decoy consisting essentially of a THAP responsive element; (4) a cell comprising a transcription factor decoy described above; (5) methods of modulating the interaction between a nucleic acid and a THAP-family polypeptide or its biological fragment, or a nucleic acid and a THAP-family polypeptide or its biological fragment, or a nucleic acid and a cell comprising a viral vector which comprises a promoter operably linked to a nucleic acid encoding a THAP-family polypeptide or its biological fragment; (7) a method of constructing a cell which expresses a fragment; (7) a method of constructing a cell which expresses a succeeding with a condition mediated by a THAP/chemokine complex symptoms associated with a condition mediated by a THAP/chemokine complex

The invention elates to novel isolated, enriched or purified nucleic acid molecules encoding a kinase polypeptide. The nucleic acid molecule comprises a sequence that: (a) encodes a kinase polypeptide; (b) is a comprises a sequence that: (a) encodes a kinase polypeptide; (b) is a complement of (a), (c) hybridizes under stringent conditions to (a) and conditions to (a) and conditions to (b) the control of an encodes a naturally occurring kinase polypeptide; (d) encodes the collegation of (a), except that it lacks one or more, but not all, of an condition of terminal domain, a coiled-coil structure region, a spacer region and a C-terminal domain, a coiled-coil structure region, a spacer region and a C-terminal tail; or (e) is a complement of (d). The nucleic acid molecules, polypeptides, methods and substance are useful for treating cancers, immune-related diseases or disorders, cardiovascular disease, brain or neuronal-associated diseases, and metabolic disorders. The disorders are preferably cancers of the tissues or of hematopoietic origin, diseases of the central or peripheral nervous system, Alzhaimer's disease, pain, viral infections, infections caused by fund; ocular diseases, methods infections caused by fund; ocular diseases, methods of secretal, infections caused by fund; ocular diseases, methods of disorders, dyskinesias, metabolic disorders, cognition disorders, dyskinesias, metabolic disorders and organ transplant control of the control of t 125 148 65 88 ATCTCAGGAGCTGGTCGCTGTCGGCTAAGCAAGATTGGAGCTACTCGTCGTCCTCCA accececececrearce de a de consecuencia de consecuente de consecuencia de conse ATCTCAGGGGCTGGTCGCTGTCGGCTAAGCAAGATTGGAGCTACTCGTCGTCGTCCTCCA GCCGCGCGCCGCTCCACGCAGCCAGCGACGCGAGATGGCGGCAGCTTCAGCGGCGGCG Gaps ä DB 10; Length 2099; Sequence 2099 BP; 484 A; 592 C; 628 G; 395 T; 0 U; 0 Other; Indels ö 98.8%; Score 1519; D; 99.9%; Pred.
